Response to Amendment

1. In response to the Office Action mailed 11 December 2007, applicant submitted a response filed 17 March 2008, in which the applicant amended claims 2 and 6 without adding new matter.

Allowable Subject Matter

2. Claims 2-3, 5-11 and 13-22 are allowed. The following is an examiner's statement of reasons for allowance: After discussion during an applicant initiated interview on 29 February 2008 with Joe Brennan and Aaron Poledna, among topics discussed were certain differences between the cited prior art (**SCANLAN**) and applicant's invention. These deficiencies among others outlined below as a summary of applicant's pertinent arguments submitted on 17 March 2008.

In general, **SCANLAN** describes "on-the-fly" or "as-needed" translation of individual electronic communications, one individual electronic communication at a time. In some embodiments, applicant's techniques are directed toward methods of sending language-customized electronic mail messages to electronic mail recipients. In an embodiment, for example, a method includes receiving an instruction to automatically generate a set of language-specific electronic mail messages containing content associated with marketing research. The instruction includes an indication of a list of recipients and an indication of a pre-assembled content set for use in automatically generating the set of language-specific electronic mail messages. The pre-assembled content set includes at least a first version of the content in a first language and a second version of the content in a second language. The method further includes

automatically generating, based on the received instruction, the set of language-specific electronic mail messages is automatically generated, with at least a first electronic mail message customized in a first language for a first recipient and at least a second electronic mail message customized in a second language for a second recipient. Automatically generating the set of language-specific electronic mail messages includes: identifying a preferred language of an electronic mail recipient from the list of recipients; selecting and writing header information to an electronic mail message based on the identified preferred language; selecting, from the pre-assembled content set, a language-appropriate version of the content associated with marketing research based on the identified preferred language; and writing a body to the electronic mail message, with the selected language-appropriate version of the content inserted into the body of the electronic mail message.

Claims 2, 6, 13 and 17 recite features that are not taught or suggested by **SCANLAN**. For example, claim 2 recites, among other things, "receiving at least one instruction to automatically generate a set of language-specific email messages." In claim 2, the instruction includes "an indication of a pre-assembled content set for use in automatically generating the set of language-specific email messages". Also in claim 2, the pre-assembled content set includes "a first version of the content in a first language and a second version of the content in a second language". **SCANLAN** does not teach or suggest these features of claim 2. To the contrary, as noted above, **SCANLAN** describes a process for translating electronic communications upon receipt, one electronic communication at a time. **SCANLAN**'s translation process does not constitute using pre-assembled content in email messages, because such pre-assembled content includes at least two versions of the content that is already in two different languages, and thus

does not need to be translated. Therefore, **SCANLAN** does not teach or suggest, among other things, "receiving at least one instruction to automatically generate a set of language-specific email messages containing content associated with marketing research, wherein the at least one instruction includes an indication of a list of recipients and an indication of a ore- assembled content set for use in automatically generating the set of language-specific email messages containing the content associated with marketing research, the ore- assembled content set including at least a first version of the content in a first language and a second version of the content in a second language," as recited in claim 2.

Accordingly, dependent claims 3, 5, 7-11, 14-16 and 18-22 are also allowed for at least the foregoing reasons as well as introducing additional limitations.
